17. Firmenkolloquium  
Beak Consultants GmbH  
Freiberg, 06.05.2011

# Agenda

- Theoretischer Hintergrund des Verfahrens: Künstliche Intelligenz / Künstliche Neuronale Netze
- Kurzdarstellung der Software **advangeo®** und der entwickelten Erweiterung / Fachschale **advangeo® Erosion**
- Beschreibung der Arbeitsmethodik am Beispiel:
  - Fallstudie: Risikoanalyse im Einzugsgebiet des HRB Glashütte
    - *Flächenhafter Bodenabtrag*
    - *Erosionsrinnen*
    - *Hangprozesse*
- Weitere Anwendungsbeispiele
- Zusammenfassung
- Webseite

# Motivation

*Where are the deposits located ?*

*Where do forest pests spread ?*

# Motivation

*Where does coal burn ?*

*Where are karst caves located ?*

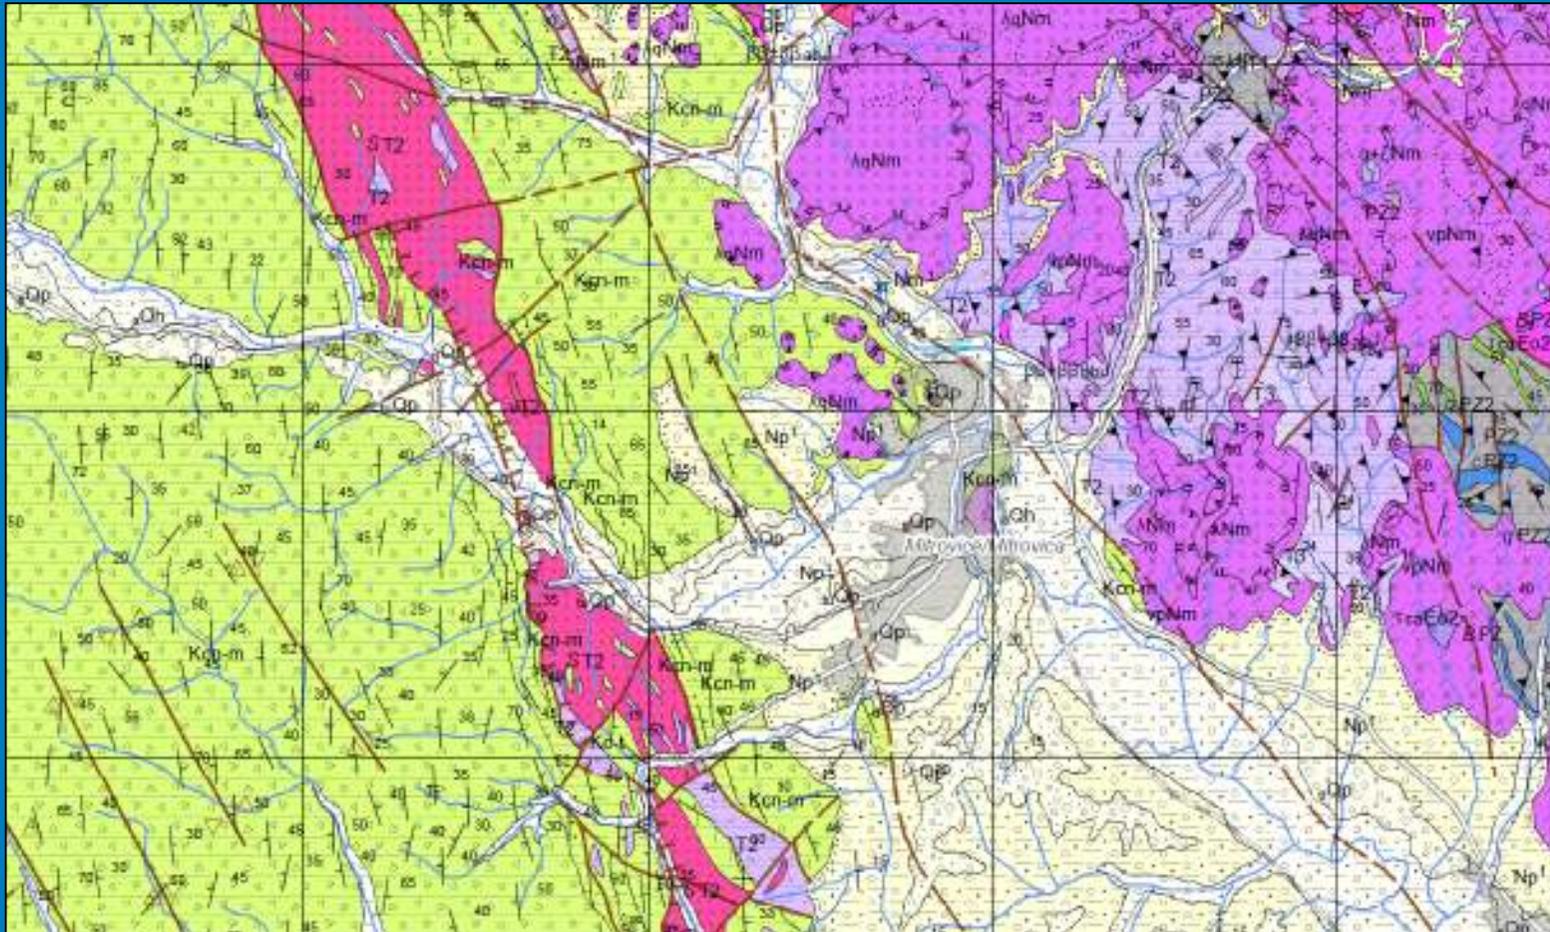

17. Firmenkolloquium  
Beak Consultants GmbH  
Freiberg, 06.05.2011

advangeo®  
Prediction Software

# Predictive Mapping: Traditional Approach

# Predictive Mapping: Modern Approach Using Artificial Intelligence

# Definition: Artificial Neural Networks

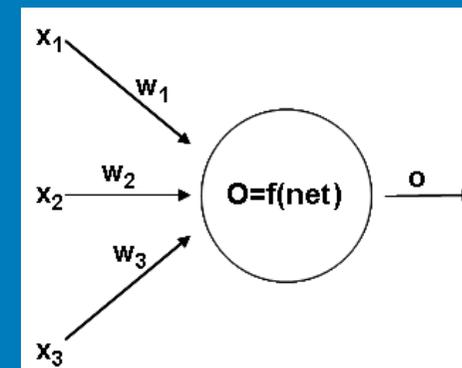

## Modell: Neuron Cell

- Functionality as a biological neural system
- Consists of artificial neuron cells
- Simulation of biological processes of neurons by use of suitable mathematical operations
- In most cases layer-like configuration of the neurons

## The Neuron Cell as a Processor

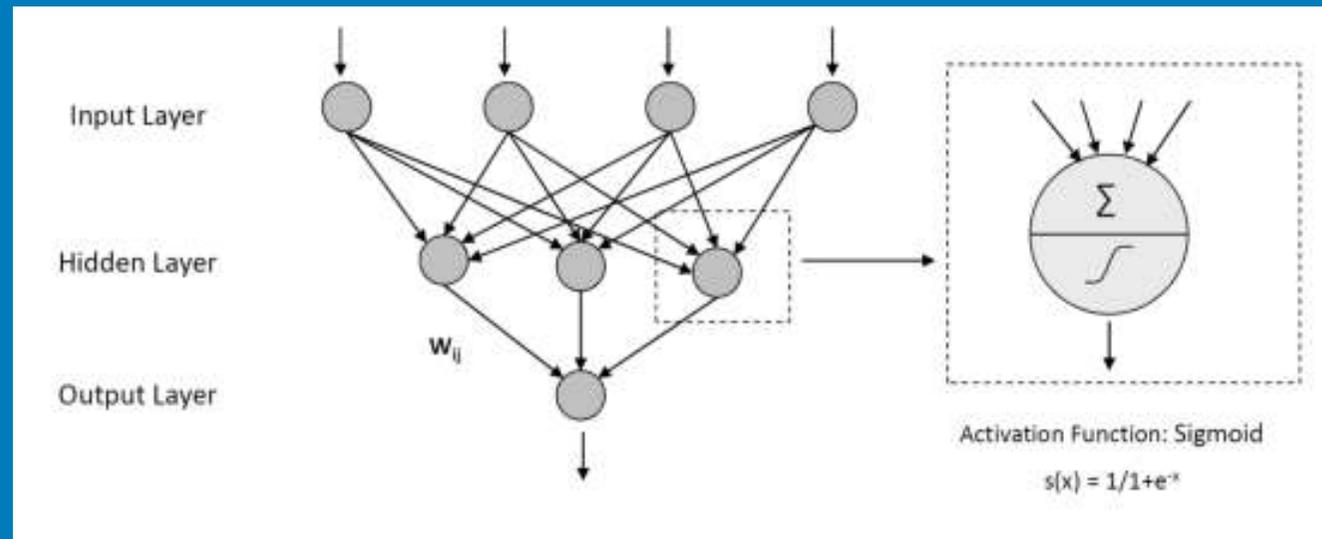

- **Connection between the neurons by weights  $w$** 
  - Enforce or reduce the level of the input information
  - Are directed, can be trained
- **Input signals**
  - Re-computed to a single input information: the propagation function
- **Output signals**
  - Activation function computes the output status of a neuron (often used: Sigmoid function)

# Principle Setup of Artificial Neural Networks

## Network Topology: MLP (Multi Layer Perceptron)

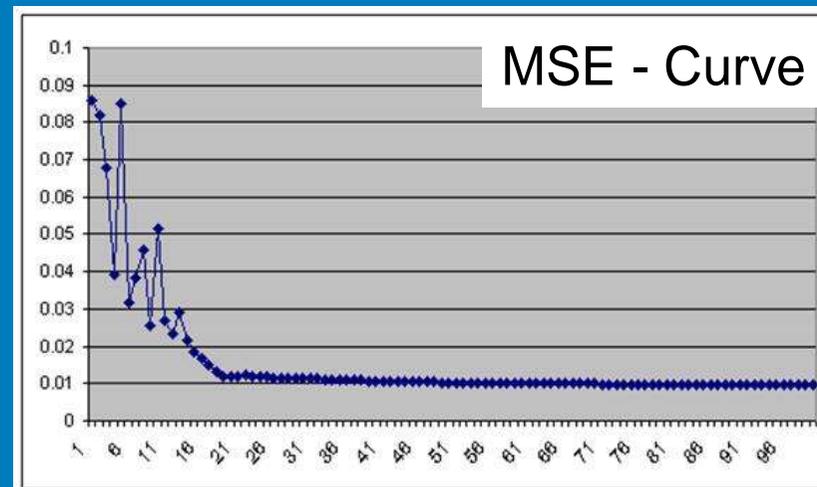

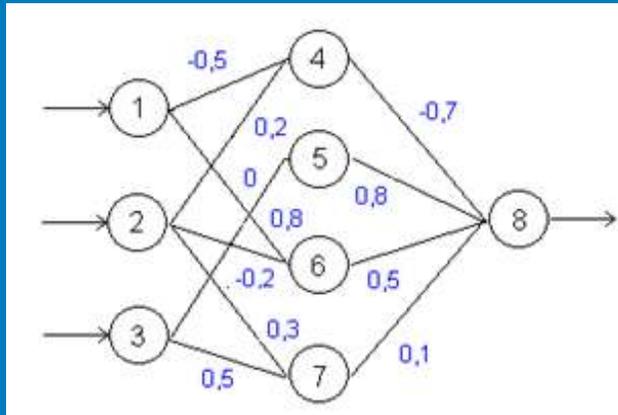

- Set-up of neurons in layers
- Direction and degree of connections
- Amount of hidden layers and neurons

# Training of Artificial Neural Networks

## Learning Algorithm: Back-Propagation

- Repeated input of training data
- Modification of weights  $w$
- Reduces error between expected and actual output of the network

# Advantages / Disadvantages of Artificial Neural Networks

## Advantages:

- **learnable**: learning from examples
- **generalization**: able to solve similar problems that have not been trained yet
- **universal**: prediction, classification, pattern recognition
- able to analyze complex, **non-linear** relationships
- **fault-tolerant** against noisy data (e.g. face recognition)
- **quick**

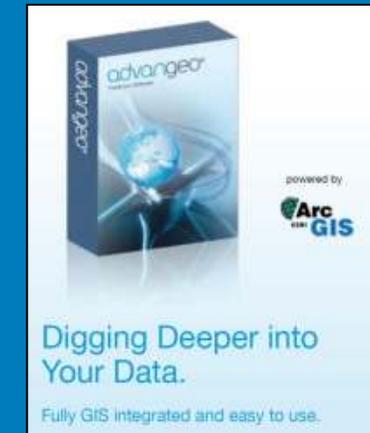

## Additional characteristics:

- choice of **topology** and **training algorithm**
- **black box system**: evaluation of weight of parameters

## Software: advangeo

- **Easy Access** to Methods of Artificial Intelligence for Spatial Prediction
- **Documentation** of Working Steps
- Capture and Management of **Metadata** for Geodata
- **Tools** for Data Pre-Processing, Post-Processing and Cartographic Presentation
- **Integration** into Standard ESRI ArcGIS-Software

# advangeo: Data and Model Explorer

Menu & Toolbar  
With Tools and Functionality

Form for Collection, Processing and Display of  
Data Objects and Models

The screenshot shows the Advangeo software interface. On the left is a project explorer tree. The main area is divided into two forms: 'Base Raster' and 'Base Data for Erosion'. The 'Base Raster' form contains fields for 'Creator', 'Project', 'Filter', 'Data Path', 'Legend', 'Description', 'Source Path', 'Extent' (with Top, Bottom, Left, Right coordinates), 'Cell Size', and 'Reference System'. The 'Base Data for Erosion' form contains a table with the following data:

Technical Name	Dataset Name	Base Data Name	Creation Date
base raster	base raster	Base Raster	2/29/2009
Project area	Projectarea	Project Area	2/29/2009
karfenblast	karfenblast1	Subarea	2/29/2009
karfenblast Teil 1	kb1_Teil1	Subarea	2/27/2009
Trainingsaree_app1	Trainingsaree_	Subarea	4/3/2009
Testarea_App1	Testarea_App1	Subarea	4/3/2009
Trainingsaree_App2	Tr_Area2	Subarea	4/9/2009

Selection of Model Input Data, Network Topology, Learning Parameter, Training Parameter

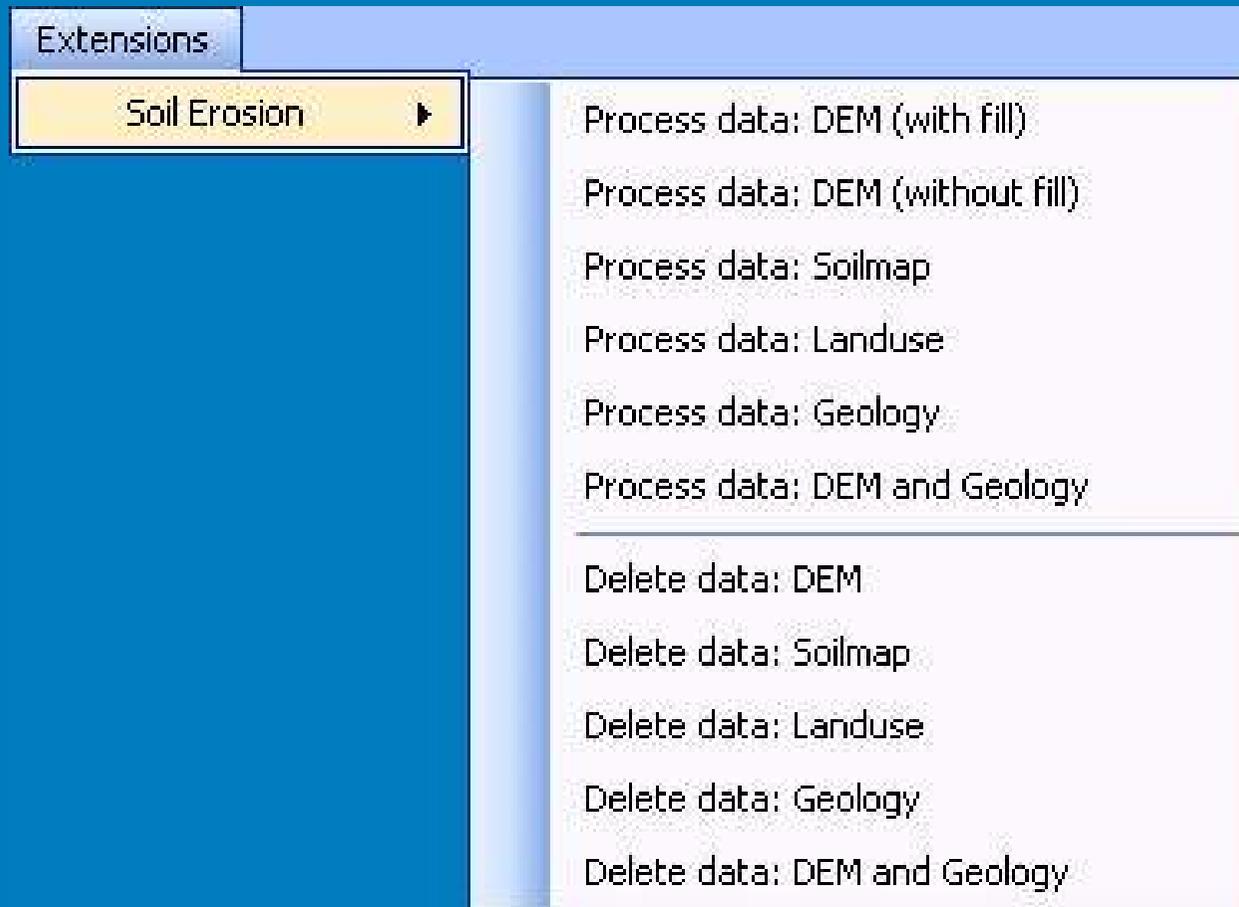

## Working Steps:

- 1. Task description
- 2. Definition of working area borders
- 3. Collection of primary source data
- 4. Processing of model input data
- 5. Statistical pre-processing  
(unit transformation, data recoding, reduction of dimensions, ...)
- 6. Modeling of training and application scenarios
- 7. Statistical post-processing  
(appraisal of repeatability, robustness, ...)
- 8. Presentation of prediction results

## Further Case Studies

- **Soil Creeping, Formation of Erosion Gullies:** Freital / Germany (2009)
- **Extensive Soil Erosion:** Weißeritz Catchment (2008)
- **Erosion Gullies:** Limpopo Area / South Africa (2009)
  
- **Coal Fires:** China (TUBAF, 2010)
- **Manganese Nodules Coverage Density:** Clarion-Clipperton Zone / Pacific Ocean (BGR, 2010)
- **Mineral Deposits / Occurrences - Pb/Zn, Au, Cr:** Kosovo (ICMM, 2003 – 2009)
- **Regolith Classification:** Burkina Faso (Vaclav Metelka, 2010)
- **Soil Contaminations in Urban Areas:** Marienberg / Germany (LfULG, 2010)
- **Spread of Forest Pests:** Tharandter Wald / Germany (Sachsenforst, 2009)

## Summary: Application of Artificial Neural Networks

- Multiple applications of the developed methodology using artificial neural networks and GIS for the **prediction of geo-hazard**
- **Currently in development:**
  - Soil Parameter Regionalisation Model
  - Mineral Deposit Prediction Model

→ We look forward to your questions, suggestions and comments and hope for future knowledge sharing and collaboration!

## News

06 May 2011, 17<sup>th</sup> BEAK Symposium -  
We inform about management and  
accessibility of geoscientific 2D and 3D  
data and the modeling of geological

**advangeo® prediction software** lets you dig deeper into your data and make more value of it by using artificial neural networks and GIS for the prediction of spatial events and phenomena like probability of geo-hazards or location of mineral deposits! When do you advangeo?
