ADVANCED GEOSPATIAL SOLUTIONS

beak
CONSULTANTS

Beak Consultants GmbH

- **Fields of business**
 - Geology, exploration, environment
 - GIS and cartography
 - Tailor-made software
- **ISO 9001:2008 certificate**
- **19 years of company experience**
- **Roots are the**
 - East German Geological Survey
 - Canadian Beak Consultants International
- **Activities in Africa:**
 - Databases and GIS
 - Mineral exploration targeting
 - Data processing

Approaches of Predictive Mapping

- **Data driven:**

- **Artificial neural networks**

- Logistic regression

- **Knowledge driven:**

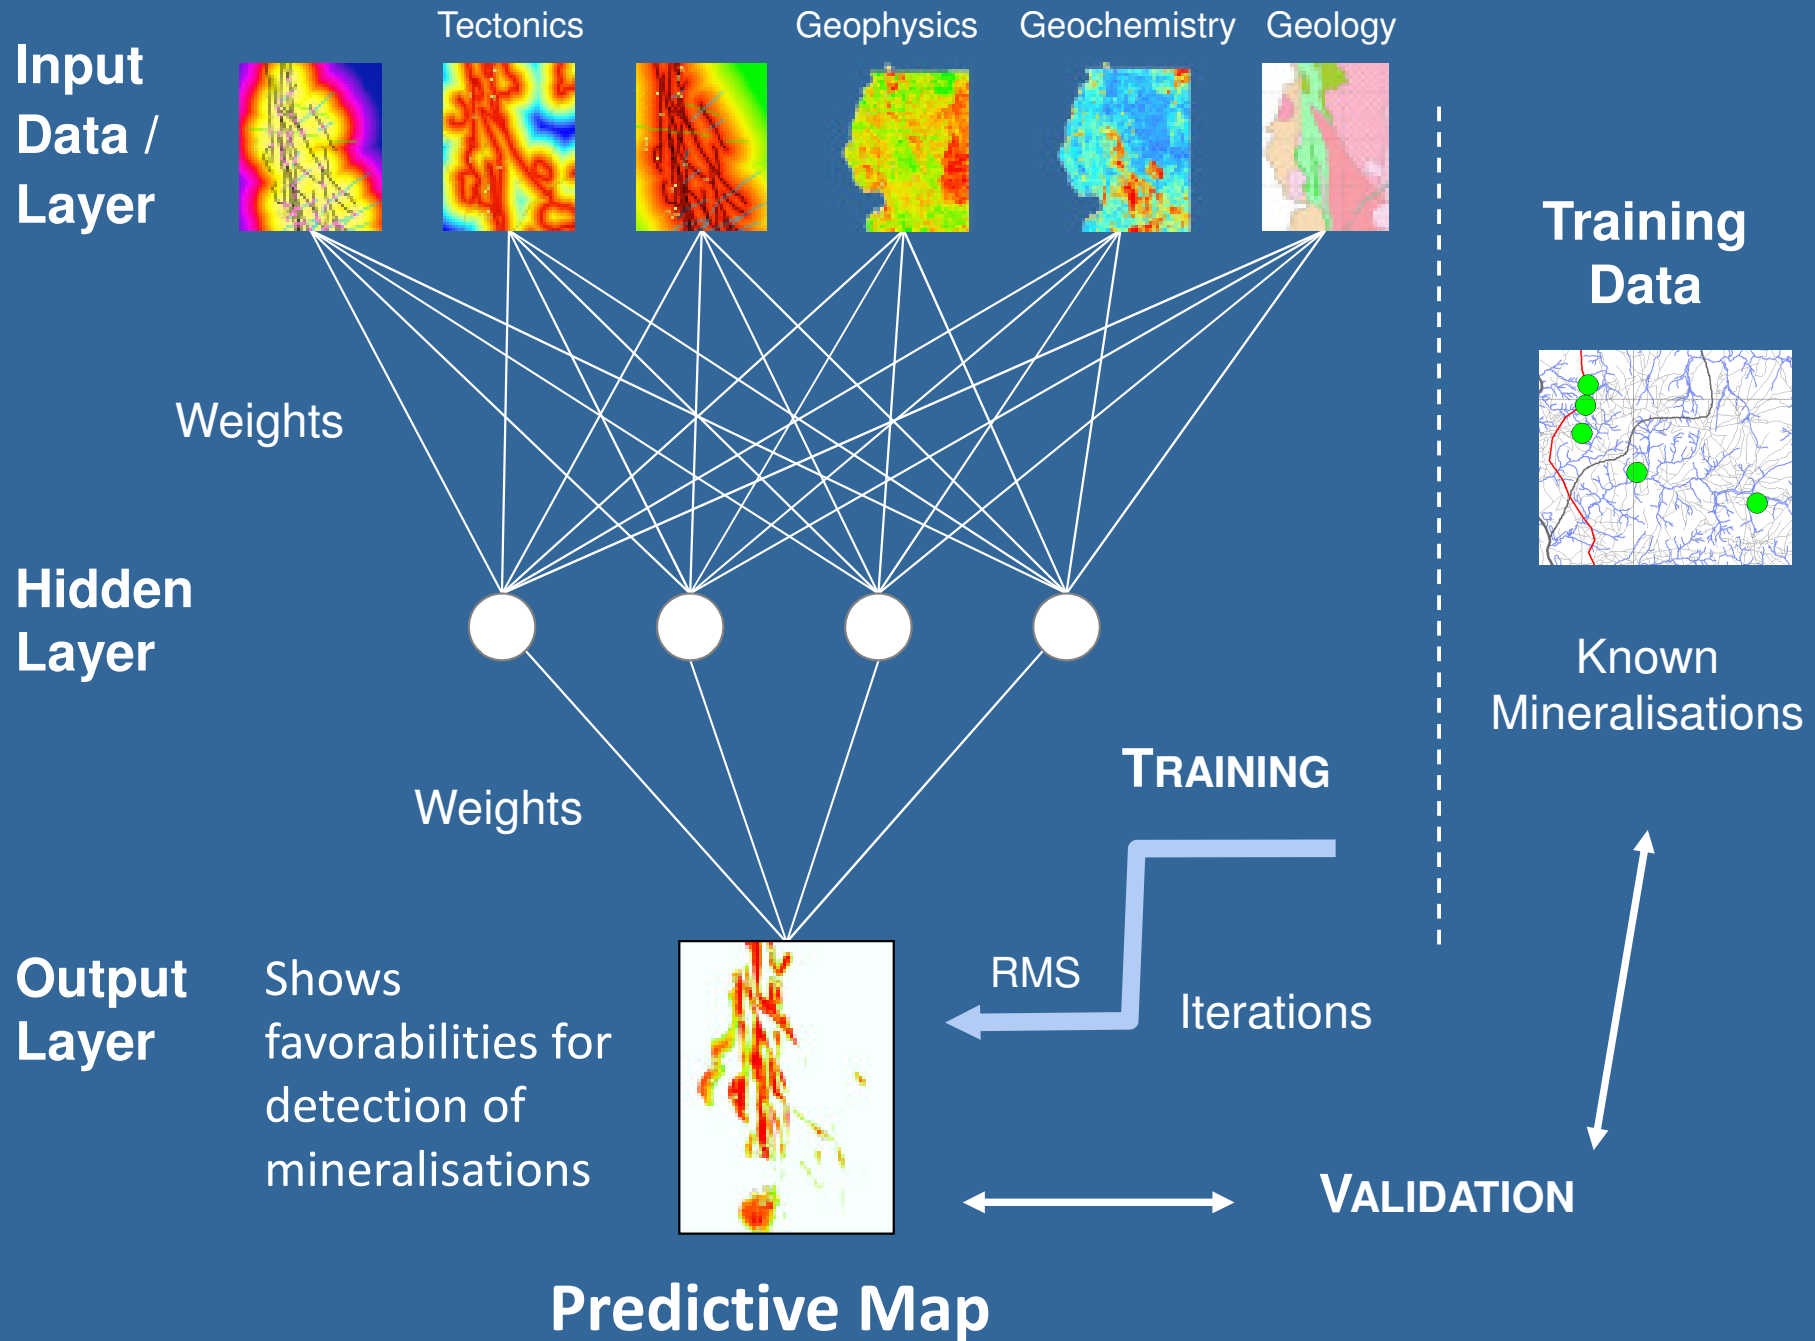

- Fuzzy logic

- Weights of evidence

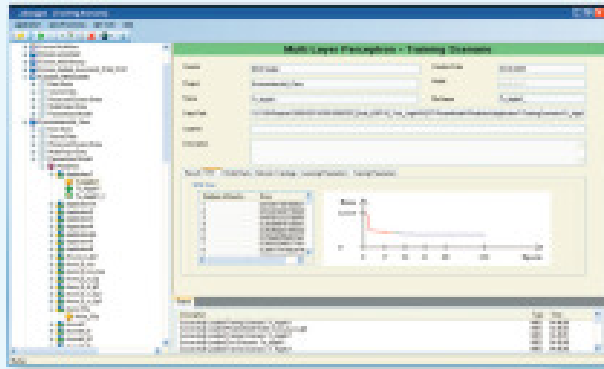

- Simple summarizing of relevant information

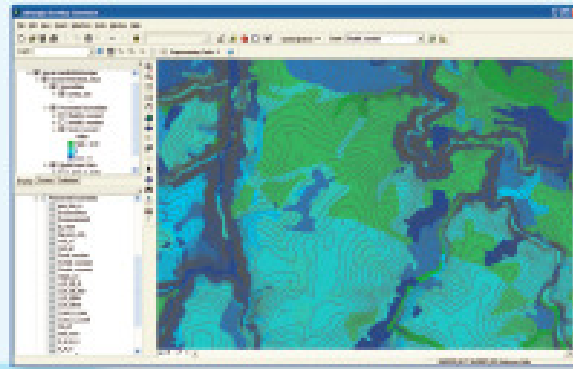

Using Artificial Neural Networks

Prediction Presentation

Agenda

- **Mineral Predictive Mapping**

- Case Study 1

- *Topic:*

- Gold in Hard Rocks / Placers in SW-Ghana

- *Project Partner:*

- Geological Survey Department of Ghana
 - TU Bergakademie Freiberg

- Case Study 2

- *Topic:*

- Niobium-Tantalum / Gold in Rwanda

- *Project Partner:*

- Rwanda Natural Resources Authority
 - Ministry of Natural Resources

CASE STUDY 1: Gold in South-West Ghana

- Prime product of Ghana for thousands of years
- Annual production reaches 134 t (2012)
- Income for millions of people

- Destroys landscapes
- Consumes land
- Competes with other land use
- Creates conflicts

Mineral Predictive Maps

- Safe exploration funds
- Attract more investment
- Guide the industry and ASM
- Foresee and manage land use conflicts
- Protect resources & environment
- Improve infrastructure planning

How to Build a Predictive Model?

- ➊ Definition of Model Accuracy / Resolution and Extent
- ➋ Selection and Harmonization of Source Data
- ➌ Processing of Source Data
- ➍ Preparation of Model Input Data
- ➎ Setting Up and Running of Different Model Scenario
- ➏ Presentation of Final Model Scenario Results

Available Base Data

- **Geodatabase Ghana**
(created during the MSSP
2005 – 2009):
 - Geological maps
(1:50,000 – 1:1,000,000)
 - Tectonic maps
 - Geophysical data
 - Mineral occurrence data
- **Additional information:**
 - Published literature

Harmonizing Gold Occurrence Data

PR. NUMBER	PR. SIZE	COMPAR. SIZE	PRODUCER	GENETIC TYPE	HOST ROCK	RESOURCES	SIZE	PRODUCER
10	0	0	current producer	vein and stockwork system	2,480,28,42,17	4	500	90
10	1	0	prospect	vein system	1,121,00,3,321,483	2	200	5
10	2	0	current producer	vein system	18,00,30	2	500	90
10	3	0	current producer	vein system	14,17,100	2	500	90
10	4	104	past prospect/producer	sediments and volcanic/basaltic	0,8,4,1,20,0	2	200	5
10	4	104	past prospect/producer	sediments and volcanic/basaltic	1,6,2,3,1,20,0	2	500	90
10	4	104	past prospect/producer	sediments	0,40,8,0,0,0,0,1,80,1,0,1,1,1,2,4,5	2	500	90
10	4	0	major prospect	vein and stockwork system	2,8,2,1,0	2	200	10
10	4	104	past prospect	sediments and volcanic/basaltic	0,8,4,1,2,0,0,1,2,1,4,1,3,3	2	500	90

Project database attributes:

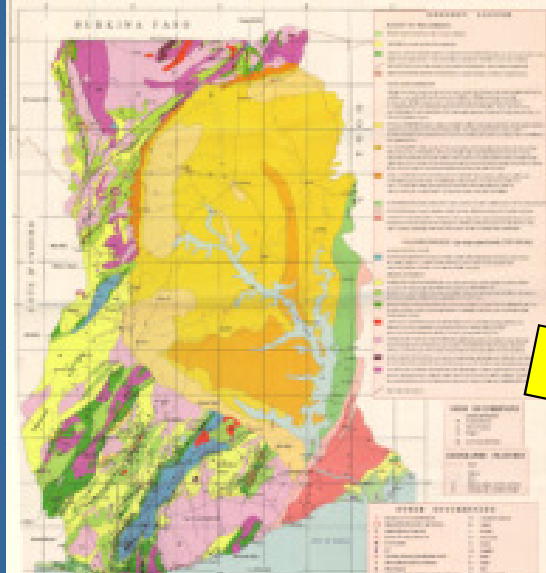

- Exact location
- Genetic type
- Host rocks
- Ressources
- Size
- Producer

- 340 vein/stockwork deposits/occurrences
- 40 placers
- 30 unclear (excluded)

Qualitative Model: Gold in Hard Rock

Input Data:

- Large faults
- Striking direction 5 – 75 degrees
- Junctions
- Small faults
- Geology

- Very clear spatial pattern
- Prospective zones are small
- Prospective zones are focused
- Most of known occurrences are located in high potential areas
- Low error: approx. 0.115

Quantitative Model: Gold in Hard Rock

Input Data:

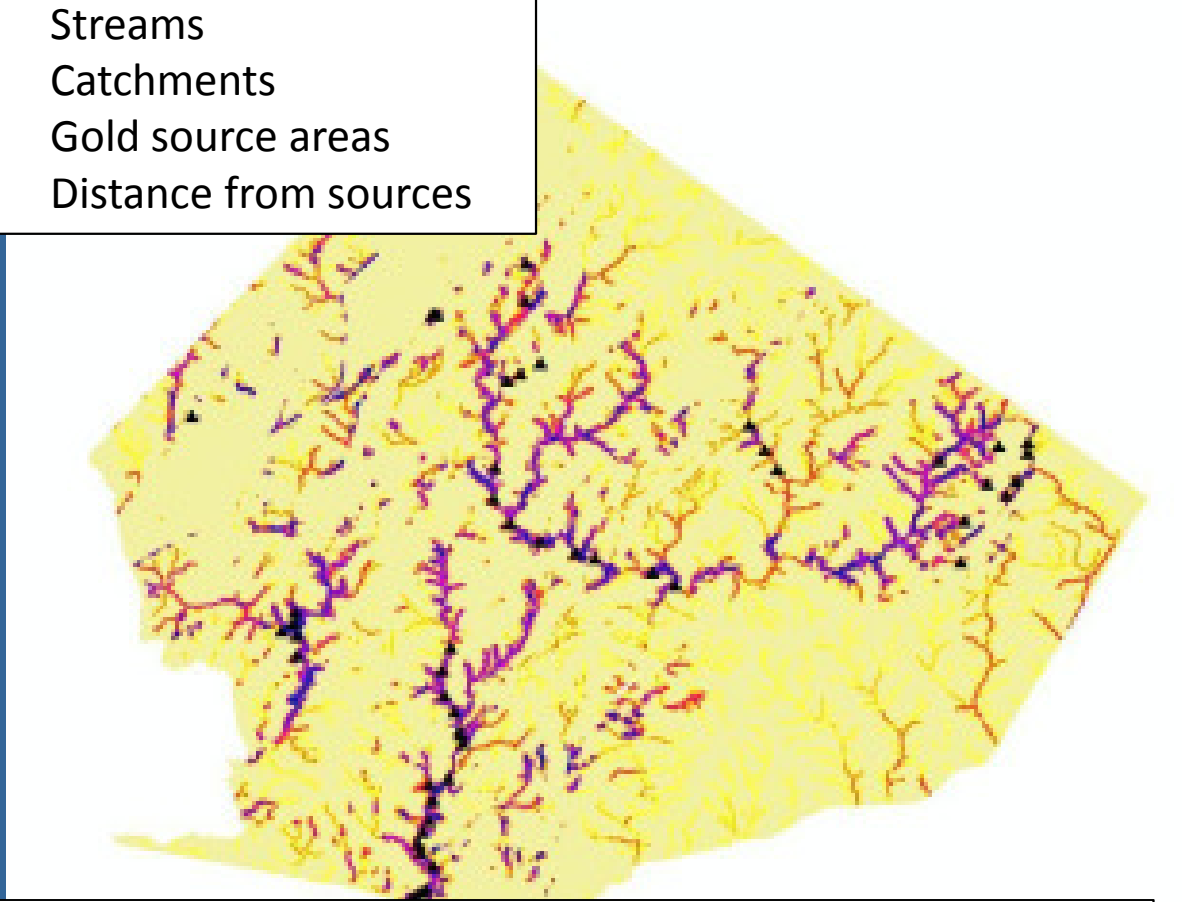

- Magnetics, absolute
- Magnetics, slope
- Magnetics, aspect
- Medium faults
- Large faults
- Junctions
- Geology

Qualitative Model: Gold in Placers

Input Data:

- Streams
- Catchments
- Gold source areas
- Distance from sources

- Very clear spatial pattern
- Prospective zones are small
- Prospective zones are focused
- Most of known occurrences are located in high potential areas
- Low error: approx. 0.06

Mineral Potential Map: Gold in Hard Rocks

- Easy to read
- Sufficient accurate
- Represents existing knowledge
- Upgradable
- Usable for national/ regional planning activities
- Base for governance maps to:
 - Protect resources
 - **Guide big investment**
 - Analyze conflicts
 - Plan long term land use

Set-up of Predictive Model

Input Data:

Airborne Geophysics (PGW):

- Magnetic: Analytical Signal, TMI, RTP
- Radiometric: K, T, U, Total
- Gravimetric: Bouguer

Geochemistry (UNDP):

- Cu, Co, Ni, Pb, Sn, W, U, Zn

Geology:

- Distance to Faults

Training Data:

Known Mineralisations:

- Minerals Map
- Aerial Images

Prediction Maps for Nb-Ta-Sn- & Au- Mineralisations

How Can Mineral Predictive Maps be Used ?

- **Protect resources !!!**
 - No further blocking by roads, settlements, water dams, ...
 - Keep resources available for the future
- **Guide exploration activities**
 - Support exploration targeting
 - Support small scale mining
- **Integrate mining into social and economic development**

→ **Minimize conflicts with:**

- Infrastructure
- Agriculture
- Nature conservation

Conclusions

- **Mineral predictive maps support:**
 - Informed decision making
 - Investment attraction
 - Small scale mining
- **Mineral predictive maps save:**
 - Exploration funds
 - Use of land
- **Mineral predictive maps help:**
 - Create mineral resource management plans
 - Develop infrastructure
